

Lomb, B. C. Centromere distance on asco (37402).

The following linkage data relate to asco (37402) in linkage group VI. This mutant, after being backcrossed once to a Lindegren strain, was crossed to Abbot 4a. At 25°C, segregation counts of 4,383 asci gave 13.94% second division segregation, a centromere distance of 6.97 map units. ■ ■ ■ Department of Genetics, University of Leicester, Leicester, England.
